

THE DNA SONG

Science class parody of *Sisters* from the movie *White Christmas*
(Song, *Sisters* is by Irving Berlin; Parody by Susan K Hawthorne)

Sisters, sisters, never were there such devoted sisters!

Adenine and thiamine together stay,

Forming a rung of DNA

Though they dislike us

Cytosine and guanine are like us,

Making up the other rungs in the strand,

They go together hand in hand

Enzymes unzip us, but God has equipped us

To copy life's pattern well.

Mitosis, meiosis, we're going to go, Sis,

To occupy brand new cells!

Sisters, sisters, never were there such devoted sisters!

Many men have tried to break our code, but no one can.

Together, we're classéd "Deoxyribonucleic acid,"

And we are amasséd in the nucleus of ev'ry cell.
